0616066_project1 report

I use minimal algorithm with max depth=3 as my AI agent.
The implementation is a simple recurrent function.
About my score function, I calculate the number of white line and black line, also calculate the center pieces. The function is describe below.
if(is_black) return black_line – white_line + center black pieces – center white pieces
Else return white_line – black_line + center white pieces – center black pieces
